

Public Input to the FCC
Telecommunications Relay Service Docket CG 03-123
September 14, 2006

Hello. Hi name is Sonia Wuttunee from -- I'm from a rural area, Millford, Virginia. I have been set up with a satellite internet, so I can use my video phone out in the rural area. We don't have DSL or cable internet services. We cannot receive high speed through those services. So I had to order satellite to use with my video phone. And of course I had a slow connection. It was hard communicating with the VRS operators. You know, I had to pay additional moneys per month to increase the speed. And I did that, and it still was too slow to produce a quality picture. Usually, I just have to make do. But I would, you know, request that some considerations be made for deaf people who need to use VRS and they live in rural areas.
